Index 1970

SUBJECTS

Acetic acid manufacture, 189
Angst the same to you, 139
Aniline, Manufacture of, 113
Anilinium ions, Solvation of, 114
Aucet at Leeds, 226

Barnett at BP Chemicals, 139
BEd . . . ?, And no to, 91
Biology, Chemistry and, 52
Bond, The hydrogen, 199
Books, 33, 72, 124, 164, 206, 252
Books or what? 215

Carcinogens, 78
Career Salaries, 255
Careers convention, 179
Cars in plastic, 92
Castner cell, A laboratory-scale, 146
Catalysis, Heterogeneous—a laboratory experiment, 150
Cathedral's copper cupolas, 8
Charge-transfer complexes, 62
Chemical industry, UK's, Touring the 192
Chemical kinetics, 30
Chemical stamps, 73, 212
Chemistry and biology, 52
Chemistry and education, 228
Chemistry and philosophy, 18, 78
Chemistry and physics, 96
Chemistry and the polytechnics, 10
Chemistry, Continuous assessment in, 9
Chemistry in context, 18, 52, 96
Chemistry in the 70s, 140
Chemistry, Industrial, and the sixth form, 108
Chemistry of lubricating oils, The, 196
Chemistry, Modern mathematics and the teaching of, 159
Chemistry teachers, How should we train?, 128
Chemists, Undergraduate, Predicting the performance of, 156
CHEM Study in an English school—a personal view, 54
Chromatography, Inorganic, experiments, 101
Chronology of the discovery of the elements, 152
Column, 6, 46, 90, 139, 179, 226
Computers or what?, 250
Construction, Model, or organic macromolecules, 196
Copper complexes and pH—some experiments, 104
Courses in chemistry, 77
Courses, Science, How to assess, 182
Crystallography, A student exercise in x-ray, 39
Cumene, Phenol from, 236

d-Block elements, 78
Demonstration experiment in gas chromatography, A, 242
Diary, 31, 75, 121, 162, 205, 246
Dilemma, with horns, 140

Education and the RS, 90
Education, Breadth in: mixtures or compounds?, 35
Education centenary, 6
Education from industry, 91
Education in the 70s, 79, 119
Elements, Chronology of the discovery of the, 152
Endpoint, 35, 79, 128, 168, 215, 255
Equipment, 29, 74, 122, 160, 203, 244

Fair exchange, 139
Fall, The, (in number of A-level chemistry candidates), 228
Fifth Column? 249
Films, 32, 163, 254
Flash kinetic spectrophotometer, An inexpensive, 230
Float glass process, The, 144
Food science education, 227

Gas chromatography, A demonstration experiment in, 242
Glass in common usage, 141
Glass, The float, process, 144

Hardness of natural water in the Mendips, 232
Heath Robinson, Shades of, 139
Heterogeneous catalysis—a laboratory experiment, 150
How short? or How, Short? 47
Hydrochloric acid, What is, 167
Hydrogen bond, The, 199

ICI's Finch, 47
Industrial chemistry, Absence of, 214
Industrial chemistry and the sixth form, 108
Industrial info for schools, 140
Industry—schools liaison, 7
Industry, UK's chemical, Touring the, 192
Inexpensive flash kinetic spectrophotometer, An, 230
Inorganic redox titrations, 238
Integrated science project, 213
Inorganic chromatography experiments, 101
Ions, anilinium, Solvation of substituted, 114
IQ race, The great, 179

Jobs for the boys, 168

Kinetic spectrophotometer, An inexpensive flash, 230
Kinetics, an introduction to: Design for an experiment, 20
Knowledge to use, Putting, 229

Laboratory-scale, A, Castner cell, 146
Letters to the editor, 30, 77, 119, 166, 213, 249
Leucoanthocyanidins in broad beans, 69
Liberal studies in science—a successful experiment, 98
Lubricating oils, The chemistry of, 196

Macromolecules, organic, Model construction of, 194
Macromolecules, Shapes of, 190
Manufacture of aniline, 113
Mathematics, Modern, and teaching of chemistry, 159
Melting points, 16, 119
Mineral water, 46
Model construction of organic macromolecules, 194
Modern mathematics and the teaching of chemistry, 159
Molecular Structure, The Sidgwick-Powell theory of, Part 1, 93; Part 2, 234
Moles, 120

Natural waterin the Mendips, Hardness of, 232
New Mathematics, 213
Nucleophilic substitution—a student experiment, 241
Nuffield chemistry, 30

Oils, The chemistry of lubricating, 196
O-level secrets, 249
Open air pollution, 90
Organic macromolecules, Model construction of, 194

Partington's history, 180
Patents as a source of chemical information, 14.
pH, Copper complexes and—some experiments, 104
Phenol from cumene, 236
Physics, Chemistry and, 96
Polytechnics: a reply, 166
Polytechnics: second class? 77
Polytechnics the, and, Chemistry, 10
Public knowledge, 180
Putting knowledge to use, 229

Redox titrations, Inorganic, 238
Research in schools, 46, 69, 114, 148, 190, 232
Rubbish, What, 7

School chemistry, Relevance of 66, 120, 166, 214
School link scheme, The, 25
School syllabus, Adapting a, to local needs, 106
Science courses, How to assess, 182
Science in art, 180
Science, Liberal studies in—a successful experiment, 98
Scientific antiquity, 8
Sidgwick-Powell, The, theory of molecular structure, Part 1, 93; Part 2, 234
Sign convention, 78, 213
Sixth-form curriculum, 8
Sixth form, Industrial Chemistry and the, 108
Solvation of substituted anilinium ions, 114.
Spectrophotometer, An inexpensive flash kinetic, 230
Stereoslides, 213
Still swinging, 46
Structure, molecular, The Sidgwick-Powell theory of, Part 1, 93; Part 2, 234
Student experiment, a—Nucleophilic substitution, 241
Substitution, nucleophilic—a student experiment, 241
Syllabus, Adapting a school, to local needs, 106

Teacher training, 120
Teacher tutor, Experiences as a, 185
Teaching Chemistry's history, 228
Technological awareness, 226
Thompson, Ubiquitous, 6
Titrations, Inorganic redox, 238
Training teachers, 77, 90
Tutor, teacher, Experiences as a, 185

UK'S chemical industry, Touring the, 192
Undergraduate chemists, Predicting the performance of, 156
US chaos? 139

Water in the Mendips, Hardness of natural, 232
Waterproof leather, 181
What shall we do about F and Q?, 48

X-ray crystallography, A student exercise in, 39
